

Digital Marketing

- Meet Dr. Ajay is Senior Vice President marketing at "Click and Boost India Private Ltd". He is a digital marketing expert and social media specialist. He has over 10 years experience in the digital marketing.

- Meet Mr. Suhas has floated a small company which manufactures springs and bearings required for machines . He is facing a problem to market his product through website. He appointed Dr.Ajay as consultant for Digital marketing.

Mr. Suhas

- "Good morning sir !" I want to understand new method of marketing in the web technology and how it differs from traditional marketing?

Dr Ajay

Digital Marketing

- Marketing refers to any activities that a company uses to promote its products and services and improve its market share.
- The term digital marketing refers to the use of digital channels to market products and services in order to reach consumers.
- This type of marketing involves the use of websites, mobile devices, social media, search engines, and other similar channels.
- Digital marketing became popular with the advent of the internet in the 1990s
- This includes not only email, social media, and web-based advertising, but also text and multimedia messages as a marketing channel

- Marketing has always been about connecting with your audience in the right place and at the right time.
- In today's era of technology it simply means you need to meet them where they are spending more time and that is on the internet.
- Traditional Marketing examples might include tangible items such as business cards, print ads in newspapers or magazines.
- It can also include posters, commercials on TV and radio, billboards and brochures.

- The world of digital marketing continues to evolve as long as technology continues to advance.
- Examples of digital marketing include things like websites, social media mentions, YouTube videos, and banner ads.
- Specifically, digital marketing is similar to traditional advertising, but using digital devices.

Difference between TM AND DM

TRADITIONAL	DIGITAL
1] The promotion of products and services through TV, Telephone, Banner, Broadcast, Door to Door, etc.	1] The promotion of products and services through digital media or electronic mediums like SEO, sem, etc
2] No direct interaction with customer	2] easy customer interaction
3] Traditional Marketing is not cost effective.	3] Digital Marketing is more cost effective.
4] Traditional Marketing is difficult to Measure.	4] Digital Marketing is easy to Measure with the help of analytics tools.
5] After the posting of the advertisement, it cannot be altered.	5] Even after the posting of advertisement, it can be amended.
6] Users have no option except to watch the ads.	6] Users can even skip the ads if they lack interest.
7] One-way communication occurs in traditional marketing	7] two-way communication occurs in digital marketing

Mr. Suhas

- Sir, You mean to say that online advertising means digital marketing?

Dr Ajay

- Well, you are partially correct but not fully, let me explain. Digital marketing is not new. It's been around since the Internet started.
- Now digital marketing is becoming popular due to the increase in internet users, mobile phone users and digital content consumption.

- 
- Think about the last important purchase you made on Internet.
 - Before buying, you probably would have searched the internet to learn about the product you wanted and your ultimate buying decision would have been based on the customer reviews, features, and pricing you researched.
 - Purchasing decisions begin online today. Hence, an online presence is absolutely necessary regardless of what you sell.

Mr. Suhas

Ok Sir, How digital marketing will help me to promote my business online? Is there any tactic or method or channel to sell my product online?

Channels in digital marketing

SEO Stands for Search Engine Optimization

Search Engine :- It is a software program that helps people find the information they are looking for online using keyword or phrases. It is designed for user to search internet content or used to search data.

Examples of Search Engines

Optimization :- It is the act of making something as good as possible.

❖ SEO is a technique used for designing and developing a website to be rank high in search engine result.

❖ SEO is the process of improving the quality and quantity of website traffic on search engine result

❖ SEO is a subset of search engine marketing

❖ The main aim of SEO process is to improve your website position in search engine results page. The higher the website is listed , the more people will see it.

❖ SEO is useful in increasing the number of visitors to a website.

❖ SEO is to attract visitors to your website when they search for products or services related to your business.

❖ <http://www.google.com>

Importance of SEO

- Increase visibility and Ranking.
- Increase web traffic
- Creating a better visitors experience.
- SEO promotes better cost management.
- SEO encourages local users to visit the physical store after the search.
- SEO increases your followers on social media.
- SEO takes you ahead of the competition

- **Mobile Marketing :**

- Mobile marketing is any advertising activity that promotes products and services via mobile devices, such as tablets and smartphones.
- From SMS and MMS to in-app marketing, there are many ways to go through with mobile marketing.

- **Email Marketing :**

- Companies communicate with their audience through email marketing.
- Emails are used to promote content, events, and discounts, and also to direct people toward the business's website.

Paid Search :

- Paid search advertising is a type of digital marketing strategy that allows companies to pay search engines to place their ads higher on relevant search engine results pages (SERPs) with the goal of driving traffic to their site.
- Pay-per-click — or PPC advertising — is the most common form of paid search.
- Using a PPC campaign means companies don't pay anything until someone clicks on their ad. This makes it an affordable way to advertise and ensures your ads reach users who are actively searching for your company's services or products.
- **Paid search results have a little green box with the word “Ad” before the listing**

- **Social Media Marketing :**

- Social media marketing is the use of social media platforms and websites to promote a product or service.
- Social media marketing is the use of social media platforms to connect with your audience to build your brand, increase sales, and drive website traffic.
- The major social media platforms are Facebook, InstaGram, Twitter, LinkedIn, YouTube, and Snapchat.

- **Content Marketing :**

- ❖ "Content is king?" Quality content is the fuel that drives your Digital Marketing strategies.
- ❖ Content marketing is a marketing technique of creating and distributing valuable, relevant and consistent content to attract audience.
- ❖ Content marketing is a strategy that uses blog articles, videos, guides, and more to attract buyers, build trust in your company, shorten your sales cycles, and ultimately help people buy your products and services. .

Mr. Suhas

- Ok sir. So I need to use any one of the above channel to increase sale of my product over the internet? But what is Search Engine? And how shall my website rank high on search engine?

Dr Ajay

- **Search Engine :**
- A search engine is a software program that helps people find the information they are looking for online using keywords or phrases.
- A web search engine or Internet search engine is a software system that is designed to carry out web search (Internet search). which means to search the World Wide Web in a systematic way for particular information specified in a textual web search query.

Dr Ajay

- The search results are generally presented in a line of results often referred to as Search Engine Results Pages (SERPs).
- The information may be a mix of links to web pages, images, videos, info graphics, articles, research papers, and other types of files.

- Now you can easily differentiate the result shown by two search engines i.e. Yahoo and Google.
- It is showing different websites having information for buying new Smartphone.
- The entire SEO works on keywords. If those keywords are being used in the content of the website then that website may rank in top ten or twenty search results.

Different Search Engine

YAHOO!

Aol.

Yandex

Mr. Suhas

- oh yes! It is crystal clear now how search engine plays important role in ranking the website.
- Please tell me shall I pay and rank my website or is there any other way which is economical which I can use to rank without paying.

Dr Ajay

Now I will tell you the difference between **Organic Search** and **Paid search**. Look at these picture and you will understand that you can pay Google or any Search Engine and rank your website on top of search.

- The keyword **Ad and sponsored** marked here shows that this site has paid Google search engine to rank him at top.
- in case of Organic search result, the searched web site is so popular that many users must have visited it. Therefore it has become popular and it is ranked by search engine on its first page

Dr Ajay

- Let me explain you how we can rank our website with the help of SEO. Techniques and strategies used to get higher search rankings, and breaking search engine rules are

These are classified into two categories.

- **White – Hat SEO**
- **Black – Hat SEO**

WHITE HAT SEO

- White hat seo is a good method / techniques for achieving good ranking for website or webpage.
- This technique includes providing a quality content which is related to your website.
- Search engine recommends this technique as a part of good design.
- This method creates quality content that people actively want to read and share.
- When this method is used then the website take some time to rank on particular keyword but your ranking safe for many years.
- This techniques follows all the search engine guidelines and protocols
- White hat SEO involves looking for ways to improve user experience ethically and genuinely

White –Hat Strategies

WHITE HAT

WHITE HAT STRATEGIES

- Relevant content
- Well-labeled images
- Relevant links and references
- Complete sentences with good spelling and grammar
- Standard-compliant HTML
- Unique and relevant page titles

BLACK HAT SEO

- It is a technique that search engines do not approve
- This technique does not follow all the search engine guidelines and rules.
- Black hat seo means a technique in which illegal methods are used to rank the website on top without following the protocol of the search engine.
- This method is called as short term success way for increased traffic.

Black –Hat Strategies

BLACK HAT

BLACK HAT STRATEGIES

- Duplicate content
- Invisible text and stuffed keyword
- Cloaking or re-directing the user to another site or page
- Links from sites with non-relevant content

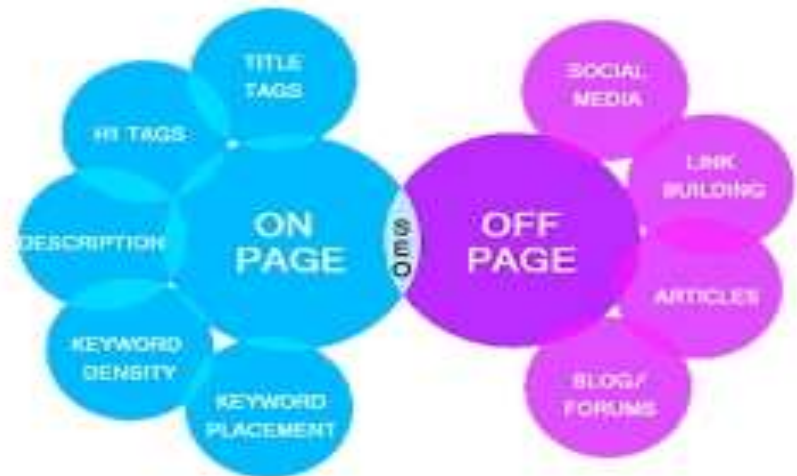

Mr. Suhas

- I heard something about On Page SEO and Off Page SEO; can you please tell me something about it?

Dr Ajay

- Search engines don't look at a page the way a person looks at it. They can only read the source code of the page.
- If you right-click on any webpage, you'll likely to see an option for viewing that page's source code (HTML code).
- If you're not familiar with HTML code it will look like a jumbled mess.
- There are number of ways to approach SEO to generate traffic to your
 - **On-page SEO**
 - **Off-page SEO**
 - **Technical SEO.**

- **On-Page SEO :**

- On-page SEO is **the practice of optimizing individual web pages in order to rank higher and earn more relevant traffic in search engines.**
- It is a information that is displayed to the end user, such as text , images , and website navigation.
- It is the provision of good content , good keyword selection, putting keywords on correct place , giving appropriate title to every page
- On page optimization aim is to make your website more usable and valuable to user to improve your ranking or visibility in search result on search engine.
- It is carried out on every page of the website.

Off-Page SEO :

- ❖ Off-page SEO is about everything that doesn't happen directly on your website.
- ❖ Off page Optimization Is a process of optimizing The website for search engine by submitting links or doing activities on other website . It is called as link building.
- ❖ It is a concerned with website and website relationship.
- ❖ In off page seo , we do not work upon Our own website
- ❖ It includes link building, increasing link popularity by submitting open directories , search engine , link exchange Etc

```
graph TD; SEO((SEO)) --> OnPage((ON-PAGE)); SEO --> OffPage((OFF-PAGE));
```

ON-PAGE

ON-PAGE SEO is concerned with INFORMATION THAT is DISPLAYED to the end user, such AS text, IMAGES AND website NAVIGATION.

OFF-PAGE

OFF-PAGE SEO is concerned with

- Website-Website relationship.
- Do other websites refer to you, do you refer to others?
- How good is your network?

SEO

• **Technical SEO :**

- Technical SEO is a very important step in the whole SEO process. If there are problems with your technical SEO then it is likely that your SEO efforts will not generate the expected results.
- A simple example of technical SEO is site speed. People do not like to wait for slow websites.
- If your pages load slowly, you will be ranked lower than a comparable site that has faster pages.
- Another example is mobile friendliness. If your site looks bad on a mobile device, search engines can detect that and lower its rankings on mobile-specific search engines.

Mr. Suhas

- Oh yes sir! Now I understand I must put relevant content on my website. But then how do I decide whether my content is relevant or not?

Dr Ajay

- Your company is manufacturer of springs and bearings.
- While developing the website a website designer must take care to add keywords such as Compression Springs, Extension Springs, Drawbar Springs etc.
- If such keywords are used in the <meta> tag while creating a website that means topic or aim of the website is same and its contents are relevant.
- The content must be designed using HTML5 or HTML tags i.e. use <i> <u> <h1> <h2> etc Tags.
- Even the alt attribute of images must be used with keywords so crawlers cannot read image but they read description and classify the content.

Sir, What are keywords?

To rank your website you must follow the tactic of Long Tail and Short Tail keyword concept.

A long tail is a long keyword and short tail is a short keyword.

You can use your intelligence to rank your website using small keywords or long keywords

- let me give you an example.
- If I want to search shoes and I type keyword 'shoes' on search engine.
- It is a small keyword used by millions of people. Here your search result shows only popular websites on the first few pages.
- Someone with new born website about 'shoes' can't expect his website to be shown on top.
- But now if he uses a keyword in the <meta> “Brown Soft Comfortable Running shoes” then such a long keyword may be used by less websites.
- This may result in ranking the website at higher position.

Mr. Suhas

Now suggest me a tool which can work and tell me what is short fall in my website so I can successfully evaluate my website optimization.

Dr Ajay

- Now I will tell you very important things about SEO Audit and how SEO optimises the website.
- An SEO Audit helps to find out what could be done to improve ranking on search engines, so that consumers could find the website with greater ease.
- SEOptimer is a free SEO Audit Tool that will perform a detailed SEO Analysis.
- There are many SEO Audit tools available on internet such as woorank.com, varvy.com, seositecheckup.com, etc.

Some of the ways to optimize the webpage for SEO are:-

I] HTML Header

- **<!doctype html> :**
 - Webpages having HTML code should start with `<!doctype html>`.
- **<Title> tag :**
 - A title tag is an HTML element that specifies the title of a web page.
 - Title tags are displayed on search engine results pages (SERPs) as the clickable headline for a given result therefor it is recommended to use `<title>` tag.
- **<Meta>tag :**
 - Meta tags are snippets of code that tell search engines important information about your web page, is also essential to boost your On-Page SEO.

Body Content

- **Heading Tags :**

- Heading tags are necessary for both usability and SEO of your web page.
- Search engines primarily take keywords from content, heading tags, and titles to develop the context of a web page. There for the webpage should include proper heading tags from `<h1>` to `<h6>` wherever required.

- **`<img>` tag with alt attribute :**

- By adding an alt text, you provide users of screen readers and search engines with a textual description of what's on that image.
- This improves accessibility and your chance of ranking high in image search.

- **Keyword Consistency:**

- Keyword consistency means having the keywords or sets of keywords those will rank your site in search engine.

Links

- **Number of Backlinks :**
 - Backlinks are links that are directed towards your website.
 - Backlinks are important for SEO because some search engines, especially Google, will give more credit to websites that have a good number of quality backlinks, and consider those websites more relevant than others in their results pages for a search query.
- **Broken Links :**
 - Broken links are links that send a message to its visitors that the webpage no longer exists, triggering a 404 error page.
- **Friendly URLs :**
 - A friendly URL **accurately describes the page using keywords that are easy to read for both search engines and users.**

● **Indexing :**

- Indexing is the process of adding web pages into Google search. It is very important in SEO to increase the ranking of the webpages.

● **Googlebot :**

Googlebot is the called as Google's web crawler.

- Googlebot is a special software, commonly referred to as a spider, used by Google that collects documents from the web to build a searchable index for the Google Search engine.
- It follows a series of links starting from one page to the next, and then processes the data it finds into a collective index.

Others Factors

- **Robot.txt :**

- Robots.txt file is what tells the search engines which pages to access and index on your website and which not.

- **Device Rendering :**

- This check visually demonstrates how your page renders on different devices. It is important that your page is optimized for mobile and tablet devices as today the majority of web traffic comes from these sources.

- **Flash :**

- Flash is an interactive media technology that makes sites more interesting. At the same time, Flash can kill your search rankings because search engines can't index Flash content directly.

- **iFrames :**

- Similarly to Flash, frames are a burden in terms of SEO. When you use frames on a page, you confuses search engines which may rank down your website.

- **Favicon :**

- Means favourite icon also known as a shortcut icon, website icon, tab icon URL icon, or bookmark icon. A favicon is a visual representation of your website and business, so users will identify with your brand based on the favicon you use.

- **Legible Font Sizes :**

- It means that a font size declared as bigger, smaller, or the same size as should be easily readable (legible) when a user is viewing the page on mobile or smaller screens.

- **Tap Target Sizing :**

- A tap target is any element on a web page that a user interacts with.
- These include action buttons, links, ads, etc. that a user taps on when accessing a web page using a touch screen.
- There for the size of such taps/touch elements should be relevant neither too small nor too big.

Performance Results

- **Number of Resources :**

- This check displays the total number of files that need to be retrieved from web servers to load your page.
- As a general rule, having more files to retrieve increases the number of server requests and can subsequently increase page load time.
- It is a good to remove unnecessary files or consolidate files like styles and scripts which are less required.

- **Page Speed Info :**

- Page speed does affect SEO as it is a direct ranking factor. While creating a website, attention is given on the design, content and as many visuals as possible. This can slow down the website and obstruct usability.

- **Page Size Info :**

- The term page size in the SEO world refers to the downloaded file size of a given web page.

- **SEO Social Media Optimization :**

- It deals with enhancing the website's ranking, using Interactive Communities like Facebook, twitter, blogs, forums etc. When these communities have links to the created website it builds familiarity and trust about the website.

- **SEO Security Checks :**

- Security is important to ensure your website protects user data, doesn't become compromised or experience downtime or data loss. It includes SSL Enabled yes or no whether it follows HTTPS, Malware Check, Email Privacy.

Mr. Suhas

Sir, I am also facing this problem. Many people visit my website but they do not purchase or place order to buy my product. This is very depressing. Sir please tell me what to do?

Dr Ajay

Yes! I will tell you why this is happening please don't be depressed. Take a look at funnel drawn below.

- You must try to understand that many users may come to your website but conversion will be little because the customer is having more choice and the market has become consumer oriented. Understand that market behaves in
- 3 stages Acquisition, behavior and conversion

❖ Acquisition

- ❖ Knowing about your website
- ❖ Developing an interest

❖ Behavior

- Watching a video on your site
- Clicking on a product description

❖ Conversion

- User becomes a customer

- **Acquisition :**

- Means creating interest in the mind of customer about your product . He must know that this product is essential for him without this product he cannot satisfy his need.

- **Behavior :**

- Once he knows about the product . He may feel of buying or may not feel to buy the product. You must put such information on your website he must feel he should buy.

- **Conversion :**

- When he is convinced and no other competitor gives him better offer then you he buys the product clicking buy option so now he becomes your ultimate customer this process is called filtration of funnel.

Mr. Suhas

Sir I heard that
Google Analytics
helps in ranking
your website at top.
How?

Google Analytics is a web analytics service offered by Google that tracks and reports website traffic, number of visitors, time spent on the website by the visitors etc. The Google Analytics was not the product developed by Google it was acquired by Google from a company Urchin in 2005.

The Google Analytics Report contains:

- Users : how many visitors came to your website (in the past 7 days)
- Sessions : how many interactions a visitor makes with your website in a time frame (usually 30 minutes) like viewing a page, clicking a link, or purchasing a product
- Bounce Rate : how many visitors hit the back button or closed your website without performing a single interaction (it's calculated through a formula)
- Session Duration : how much average time a visitor spends on the website
- Active Users right now : how many active users are currently active on your website

Thank you sir you have given me a positive thought now I will work on the strategy explained by you in this above explanation and improve my digital marketing even I will work on content and social media marketing too.

Thank you I wish you
success in your task.
Bye! Have a nice day.
